Blade Kits

**JUPITER**  
GROUP

Jupiter is a global market leader within high-end and high-quality composite components for the wind turbine industry. Our company manufactures composite nacelle covers and spinners as well as blade kits used in wind turbine blades

Jupiter is positioned towards five out of top ten OEMs, who are representing 40% of the global market. Our most significant customers are well-reputed companies such as: GE, Siemens, Goldwind, Suzlon and Nordex.

- Our mission is to develop and supply value adding products based on environmentally friendly production methods.

- Our vision is to maintain and further establish our position as world market leader within quality nacelle covers, spinners, balsa kits and related composite products for the high-end wind turbine industry.

- Our strategy is to grow by supplying current and future account portfolios with innovative and complementary composite and balsa blade kit solutions while establishing production facilities that meet the customers' needs.

Our aim is to tailor a perfect partnership by identifying and meeting your requirements.

**We:**

- Are adaptive according to your changing needs.

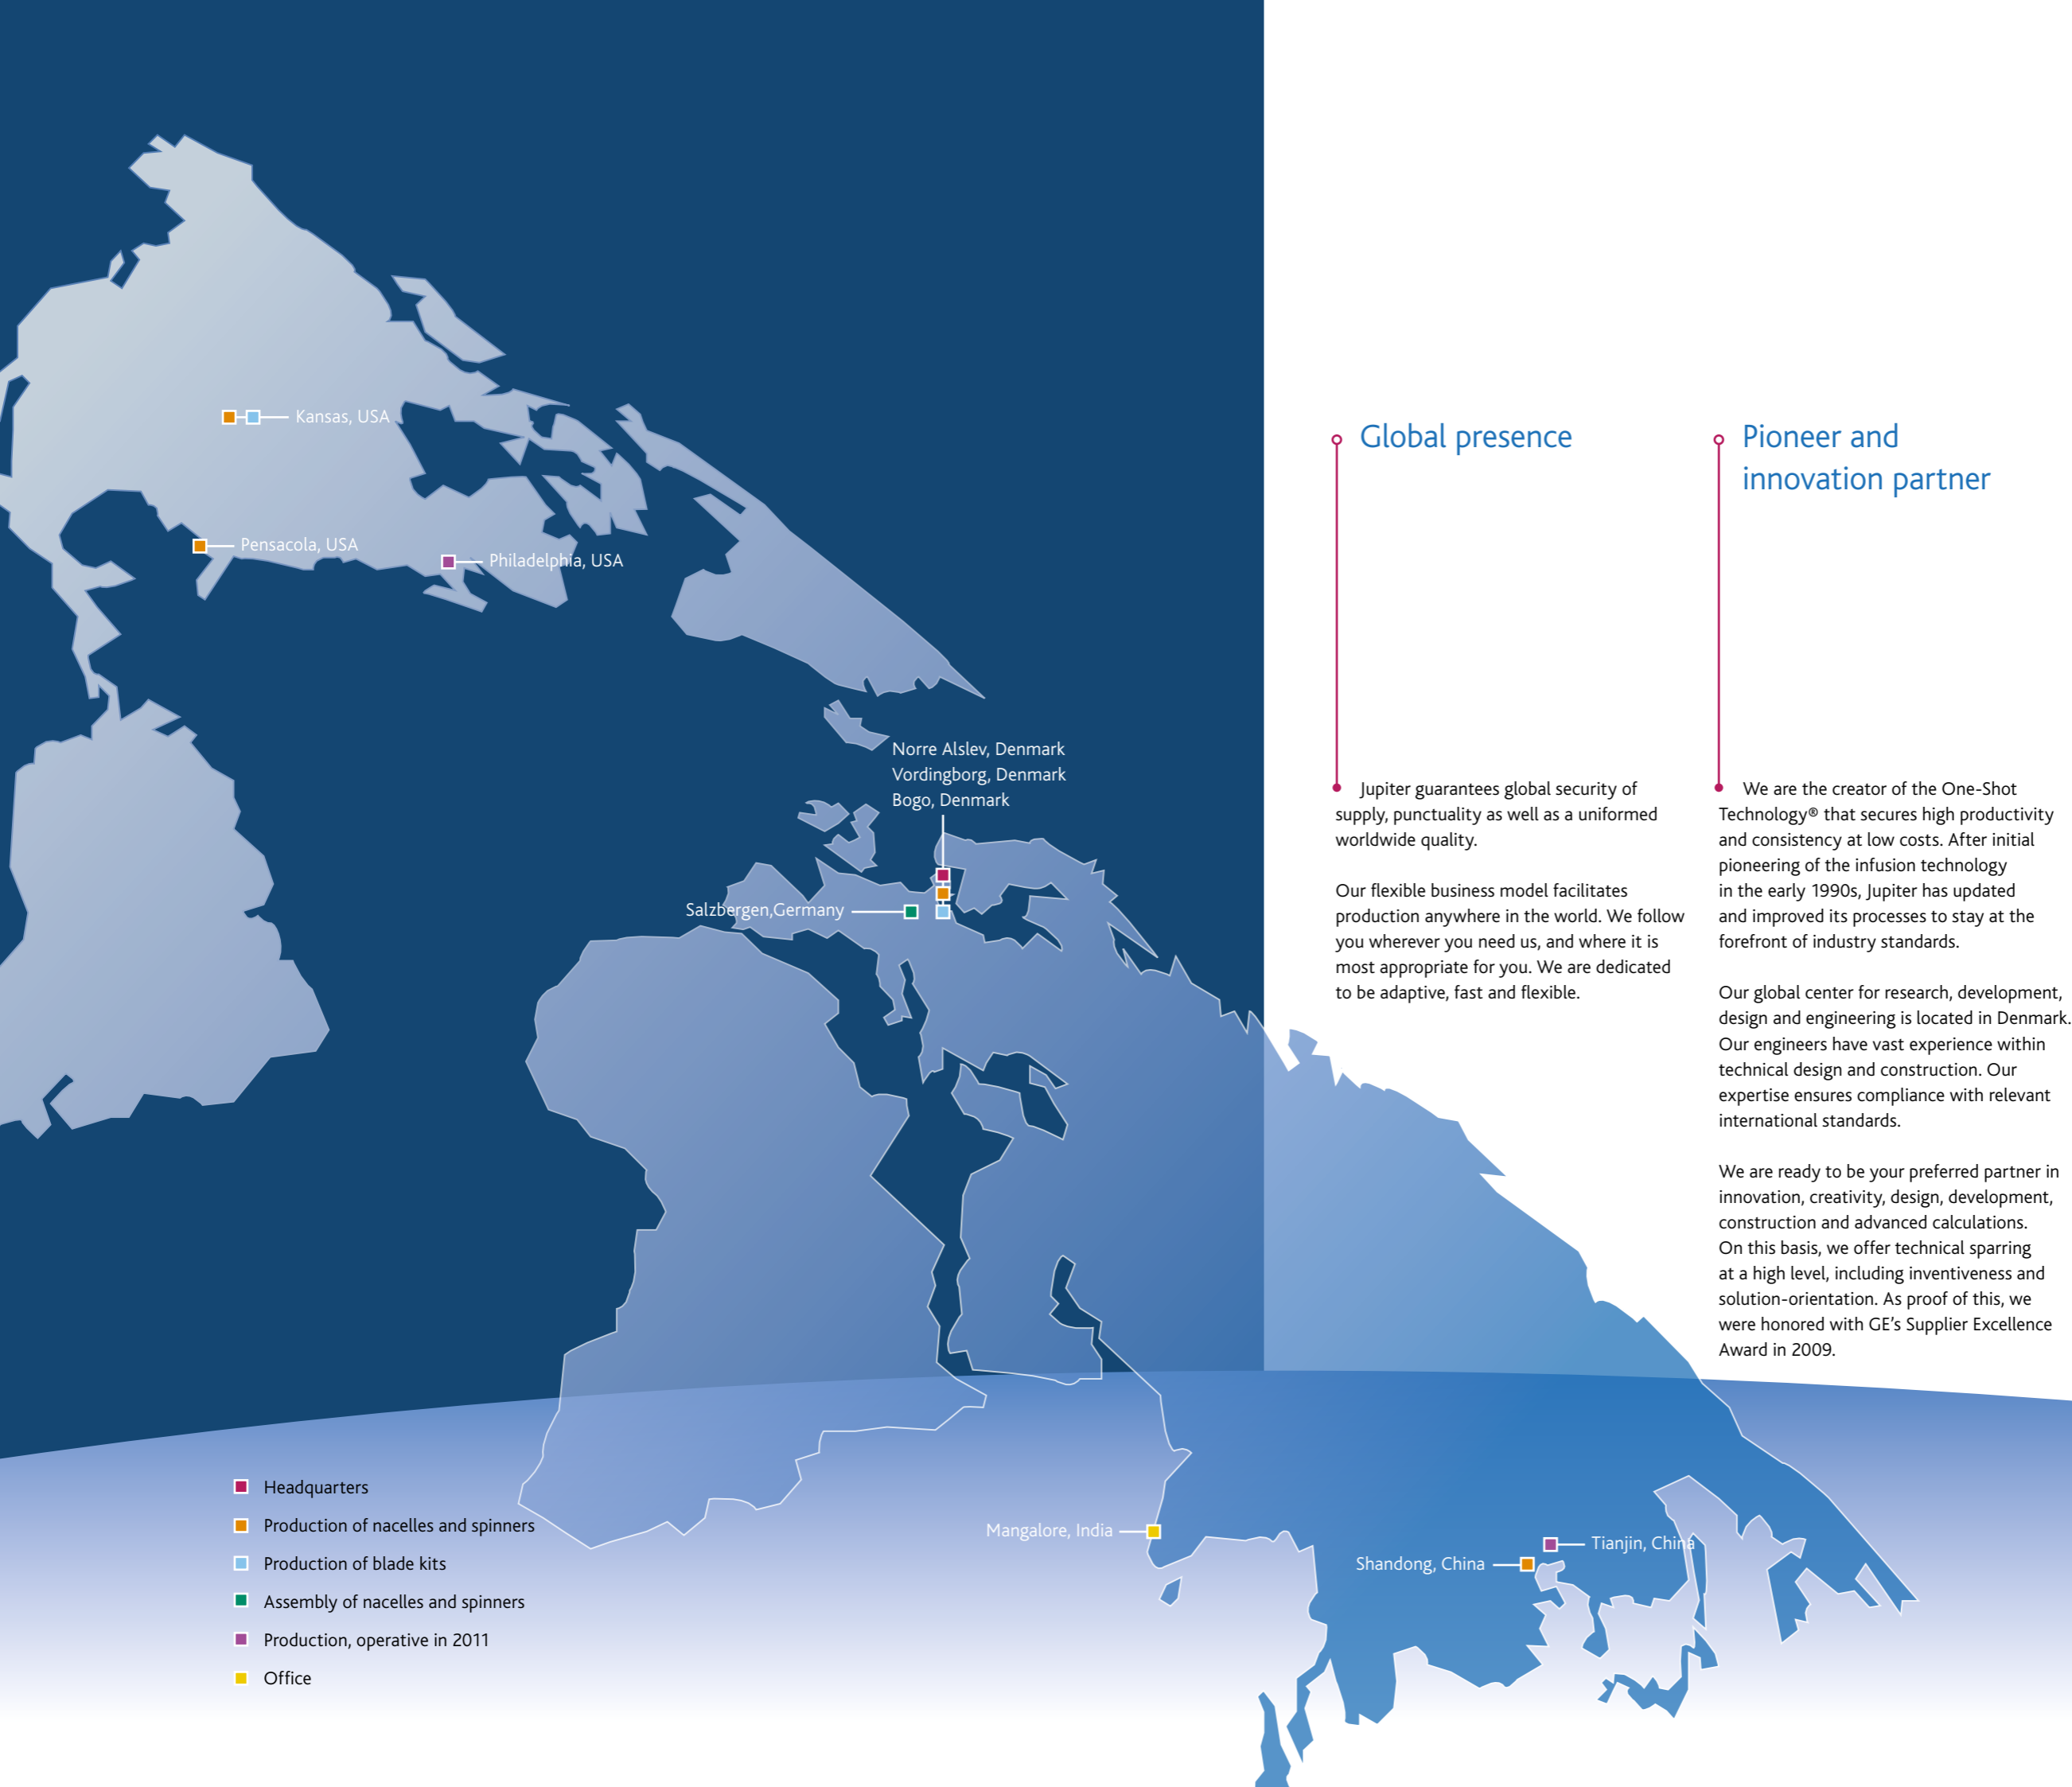

- Design, prototype, test and mold manufacture in cooperation with you.

- Manufacture at our operations or next door to your production site.

- Assist in optimizing your supply chain management.

- Have production facilities and methods capable of following your geographic expansion.

### Global presence

Jupiter guarantees global security of supply, punctuality as well as a uniformed worldwide quality.

Our flexible business model facilitates production anywhere in the world. We follow you wherever you need us, and where it is most appropriate for you. We are dedicated to be adaptive, fast and flexible.

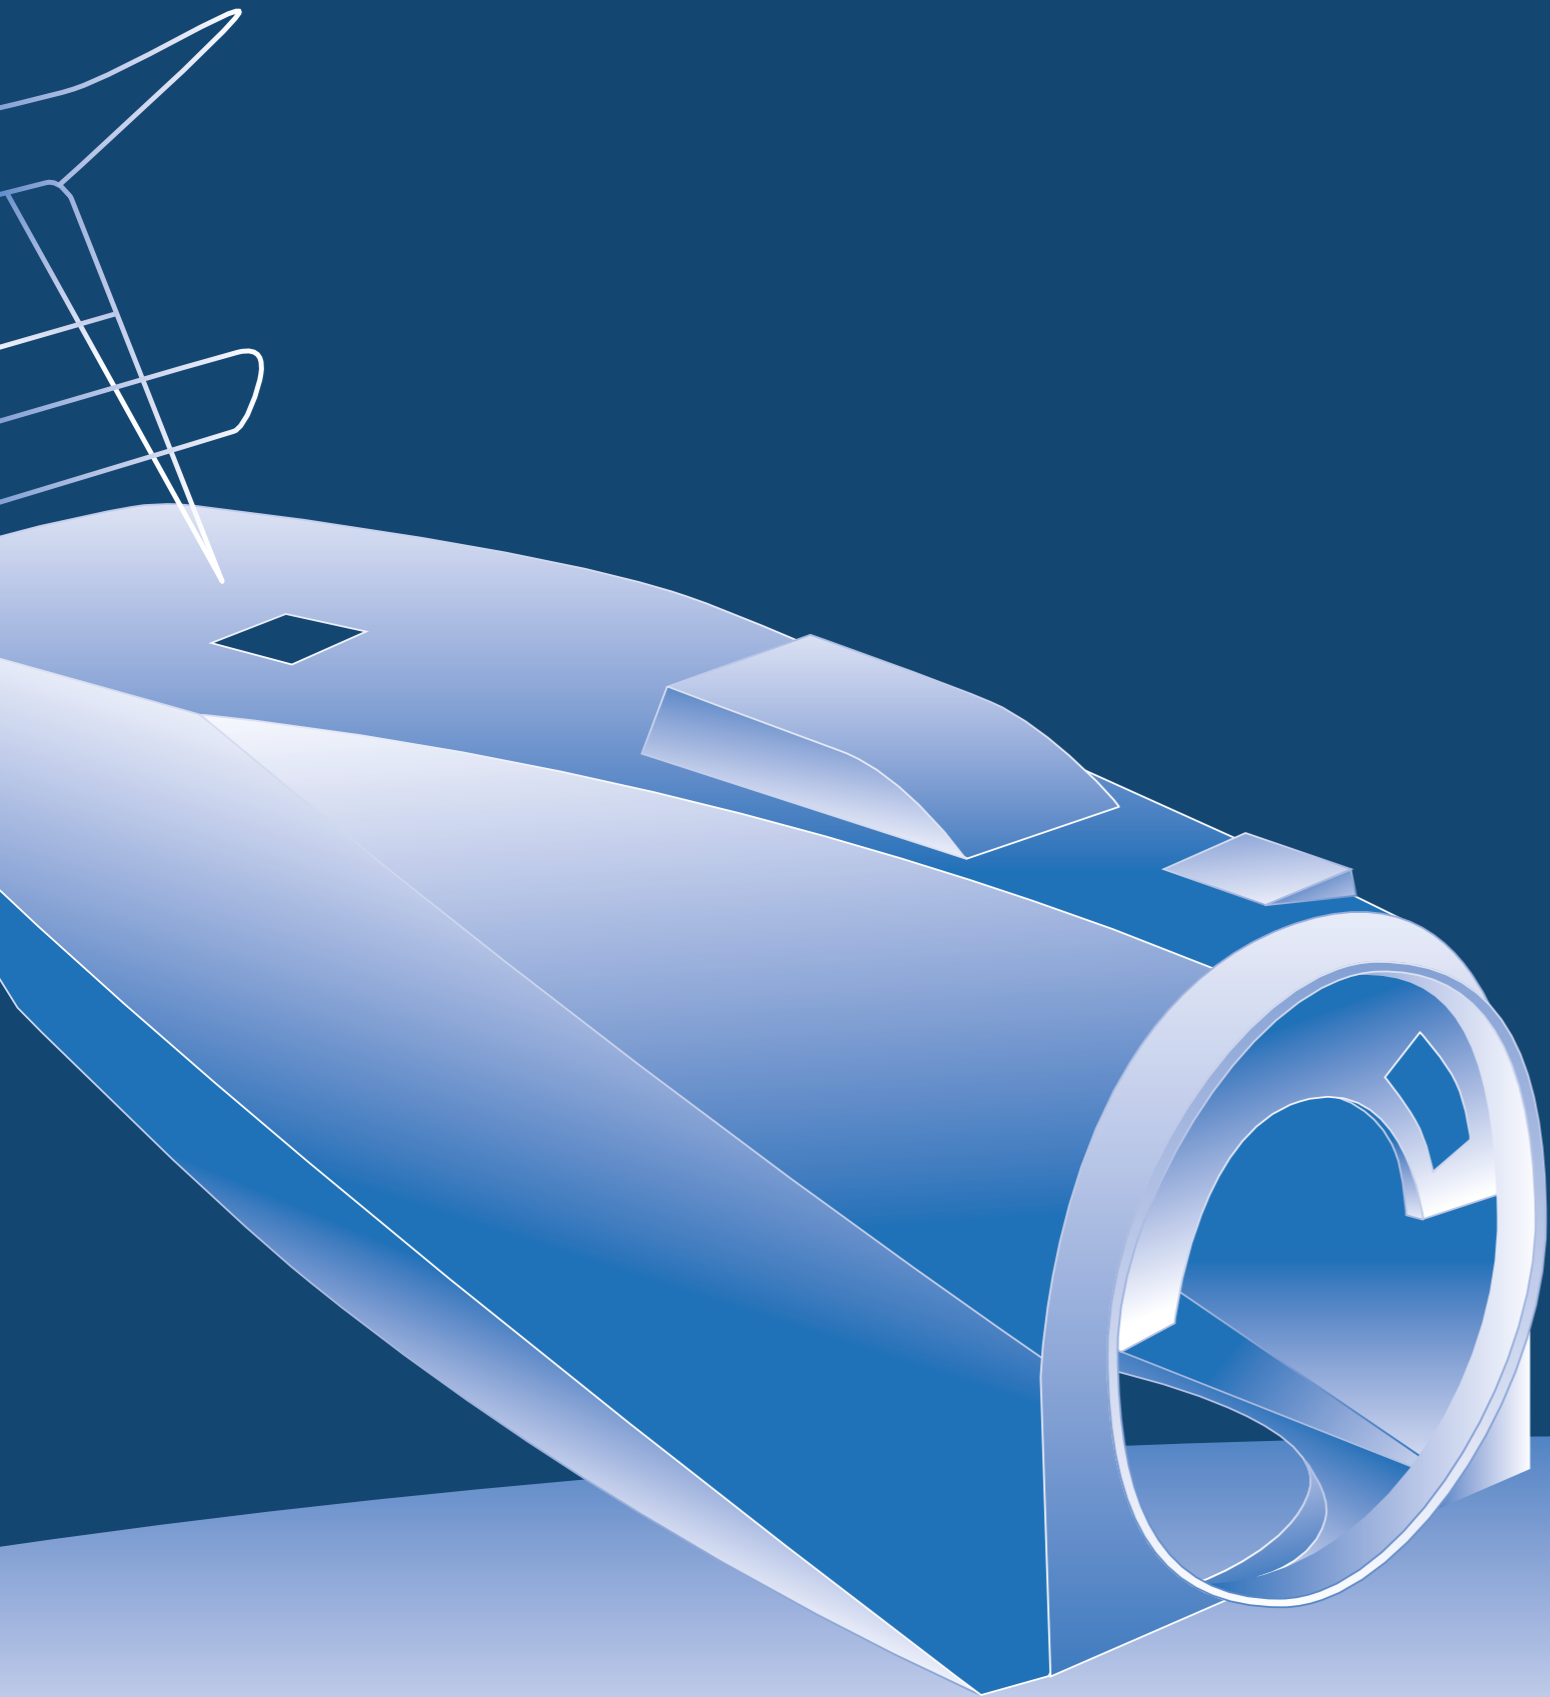

### Pioneer and innovation partner

We are the creator of the One-Shot Technology® that secures high productivity and consistency at low costs. After initial pioneering of the infusion technology in the early 1990s, Jupiter has updated and improved its processes to stay at the forefront of industry standards.

Our global center for research, design and engineering is located in Denmark. Our engineers have vast experience within technical design and construction. Our expertise ensures compliance with relevant international standards.

We are ready to be your preferred partner in innovation, creativity, design, development, construction and advanced calculations. On this basis, we offer technical sparring at a high level, including inventiveness and solution-orientation. As proof of this, we were honored with GE's Supplier Excellence Award in 2009.

### Minimizing landed costs

We are committed to delivering thoroughly developed solutions to optimize your value and minimize landed cost. In these efforts, we continuously focus on:

- Reduced material consumption
- Reduced weight
- Space-saving
- Easy transportation
- Easy handling and assembly
- Long durability
- Recycling and sustainability
- Reduction of carbon dioxide emissions
- Easy replacement and repair.

### Quality and standards

To ensure high and homogeneous quality, we are certified according to ISO 9001.

We are committed to the continuous improvement of our environmental performance and have implemented ISO 14001 – Environmental Management. Our environmentally friendly production process ensures a unique, high-quality product.

We conduct our internal tests according to Germanischer Lloyd and DNV Guidelines.

All our products are delivered with full documentation ready for certification.

### Corporate Social Responsibility

We are committed to practicing a Scandinavian attitude worldwide. This includes:

- Sustainability, according to UN Global Compact Agenda
- Environmentally friendly manufacturing for a green industry
- Security, humanity and a good working environment
- CO2 consciousness
- Continuous balance between People, Planet and Profit.
